

"Two-step application - it lifts the entire paint intact"

ES1 is the perfect solution for all your outdoor paint removal needs

This product information is only intended as a guide to the handling of the product. Therefore, the ES METHOD cannot provide any guarantee for the achieved results. The user of the product shall perform tests and be responsible for the outcome.

Experience the simplest and most effective way to remove paint, including plastic paint, dispersion paint, and linseed oil paint, from ceilings and facades with our revolutionary product, Paint Remover ES1. With ES1, you get an unbeatable performance chemical that removes the paint intact using the proven ES METODEN.

One of the most impressive features of ES1 is its ease of use. You no longer need to worry about heating or heavy scraping that can negatively affect your health. ES1 penetrates deep beneath the primer and affects its adhesion, giving you a clean surface without any effort. To ensure proper protection of your surroundings, we recommend covering sensitive plants and surfaces made of plastic and rubber nearby.

For your own safety, always use protective goggles during the application of ES1. Apply ES1 in concentrated form and adjust the thickness depending on the temperature - the colder the surface, the thicker the application should be. The normal reaction time varies between 1 and 3 hours, depending on the temperature. If necessary, you can add heat to accelerate the process so that the paint, the skin of the paint, can loosen. But be careful not to let the paint stick or become permanent before lifting it off.

After completing the treatment, simply rinse the surface with warm water from top to bottom. Easily collect paint residues in a sturdy garbage bag and dispose of them at an environmental station for proper handling. Paint Remover ES1 offers a groundbreaking solution for easily and safely removing paint from ceilings and facades.

With its user-friendly, biodegradable properties and easy application, ES1 is the obvious choice for all your paint removal needs. Take control of your project and achieve a perfectly clean surface with Paint Remover ES1.

ES1 is designed to work quickly and efficiently. After just 1 hour, you will be able to see amazing results. You no longer have to wait for hours or even days to achieve the desired effect. ES1 gives you fast and impressive results that will exceed your expectations. The paint will have loosened intact from the surface! When you use ES1, you will notice how easy it is to lift the paint off the surface. The powerful chemical quickly penetrates and dissolves the paint, making it easy to remove. You will be amazed at how smooth and easy it is to achieve a clean and paint-free surface with ES1 - you can easily lift it off with your hand!

ES1 is the perfect solution for all your paint removal needs. Its fast action and ease of use make it the obvious choice for both professional users and DIY enthusiasts. Get ready to experience easy and effective paint removal with ES1 - your key to amazing results!
